

LAURENS BOSSCHER

SOFTWARE ENGINEER

EXPERIENCE

Software/DevOps Engineer

Now – 2020

SIX Swiss Exchange — Zürich, Switzerland

- Part of the core team (4 engineers) responsible for running the 2000+ SIX indices including the SMI
- Initiated and led the initiative to move to Ansible and GitOps to ensure that test and production environments are aligned so that release risk was greatly reduced
- Responsible for development of the SIX Crypto indices calculator engine (Scala using Akka) including introducing new calculation methods and a major rewrite of the calculation and reporting engine. 100% uptime during market hours
- Prevented several serious incidents by debugging and fixing (legacy) business critical applications under pressure
- Improved documentation, developed several smaller Python/Scala monitoring and automation applications to further reduce risks

Software Engineer

2020 – 2018

Simplicate Software — Groningen, The Netherlands

- Most senior engineer in the team (5 developers) responsible for all Typescript and Javascript projects
- Increased release cadence archived by the team to 1 release a week (down from once every 6 months)
- Increased developer productivity utilizing modern continuous delivery practices such as a loosly coupled architecture, continuous integrations and automated testing
- Decreased time spent on bugs from ~20% to ~10% by increasing test quantity and quality
- Optimized and scaled a (near) realtime GraphQL Django application, to meet the demands of our biggest customers
- Fast paced, high pressure environment with a large amount of technical debt
- Simplicate was part of the 50 fastest growing tech companies in the Netherlands for the past three years (2019 - 2021), having a growth of 3018% in 2019

Software Engineer

2018 – 2015

Slimmere AI (formerly Target Holding) — Groningen, The Netherlands

- Developed and scaled the second largest student performance tracking system in the Netherlands (used by 1.1 million students)
- Started as junior/medior developer, grew to team lead (team size of 3 developers)

Software Engineer

2015 – 2014

Getlogic — Groningen, The Netherlands

- Developed an extensive testing framework for Django to rapidly increase test coverage for common scenarios
- Increased webshop performance by 200% by implementing Spdy/Http 2.0 and optimizing caching strategy
- Created an new Linux hosting environment utilizing RabbitMQ/Salt/PostgreSQL/Solr for a large webshop

Junior Software Engineer

2014 – 2013

DiagnOptics — Groningen, The Netherlands

- Developed a companion application for their main product so that research results can easily be shared, logged and archived.

SELECTED PROJECTS

Front-end codebase

2018 – Now

Simplicate

- Utilized React and Typescript to build a modern codebase where we could share business logic between the browser, two mobile apps (iOS and Android), NodeJS (for PDF rendering) and a browser extension
- Worked with Typescript, React, Redux, Mobx StateTree, Python, NodeJS, Docker, Django, GraphQL as well as with legacy technology such as Yii and PHP

Diatoetsen

2018 – 2015

Slimmere AI (formerly Target Holding)

- Utilized a combination of Galera (triple master MariaDB setup) and Cassandra to guarantee high performance and scalability for peak workloads
- Worked with Python, Typescript, MySQL, Cassandra, Elastic Search, Redis and Salt

EDUCATION

Business Innovation, Usability & Interaction (Human Technology)

2013 – 2009

Hanzehogeschool — Groningen, The Netherlands

Completed an Honours minor and an Honours project.
